

Sahaj Bhangu

She/Her

Vancouver, BC | sahajbhangu17@gmail.com | LinkedIn | GitHub

EDUCATION

Simon Fraser University

Bachelor of Science, Major in Computer Science

Expected Year of Graduation: June 2029

Vancouver, BC

TECHNICAL SKILLS

Languages | C/ C++, Python, JavaScript, SQL, HTML/CSS

Libraries/Frameworks | NumPy, PyGame, Pandas, React, Tailwind CSS

Developing Tools | Figma, Blender, VS Code, Git

EXPERIENCE

Sponsorships Coordinator (Try/CATCH 2026) | SFU Women in Computing Science (WiCS) | Jul 2026 – Present

- **Managed the end-to-end sponsorship lifecycle** for WiCS Try/CATCH events, including outreach, agreement negotiations, and deliverable coordination.
- **Led cross-functional collaboration** with Finance and Visual Design committees to ensure timely execution of sponsorship benefits.
- **Proactively monitored project timelines** and identified gaps in team responsibilities to ensure no sponsor relationship is overlooked.

Technical Operations Lead (via Riipen Labs) | The J Healthcare Initiative | Aug 2026 – Sep 2026

- **Audited existing volunteer recruitment materials** across website, LinkedIn, and Idealist to identify gaps and inconsistencies in messaging and application processes.
- **Mapped current user navigation flow** across three platforms, identifying operational inconsistencies that caused applicant confusion and drop-off.
- **Redesigned the volunteer application process** with a **clean UI and navigation flow**, centralizing recruitment onto the main website with a unified Google Form submission.
- **Collaborated cross-functionally** with communications, strategy, research, and project leads to build an efficient solution targeting the core issue.

PROJECTS

Sleeperea | Python, Figma, Web Application

- **Designed and developed** a web-app that generates personalized sleep schedules from surveys, including a sleep journal for users to track their habits.
- **Implemented data handling logic in Python** to convert survey responses into customized sleep schedules based on user input, ensuring the app delivered actionable, personalized recommendations.
- **Selected for showcase** at the South Fraser Regional Science Fair 2024.

Stack-Based Postfix Calculator | C++, Stacks

- **Developed a terminal based calculator using Reverse Polish Notation (RPN) and a LIFO stack-based architecture** to achieve $O(n)$ computational efficiency.
- **Implemented Advanced Operator Logic:** Built **binary** (+, -, *, /), **unary** (abs, dup, sin, cos), and **command-based tokens**, managing complex **stack state** and operand retrieval.
- **Designed a Custom Lexical Tokenizer:** Created a parsing system to validate space-delimited inputs and handle edge cases like stack underflow and malformed expressions.
